

HOP.SEL – Guide for Downloading and Installation

You can download the latest version of HOP.SEL (01/2010) here:

<http://www.homa-pumpen.de/hopsel.exe>

The file size is 202.8 MB, so the download can take some minutes depending on the available bandwidth and the server load.

After the download has finished, double-click on the file hopsel.exe and press the button „Setup“.

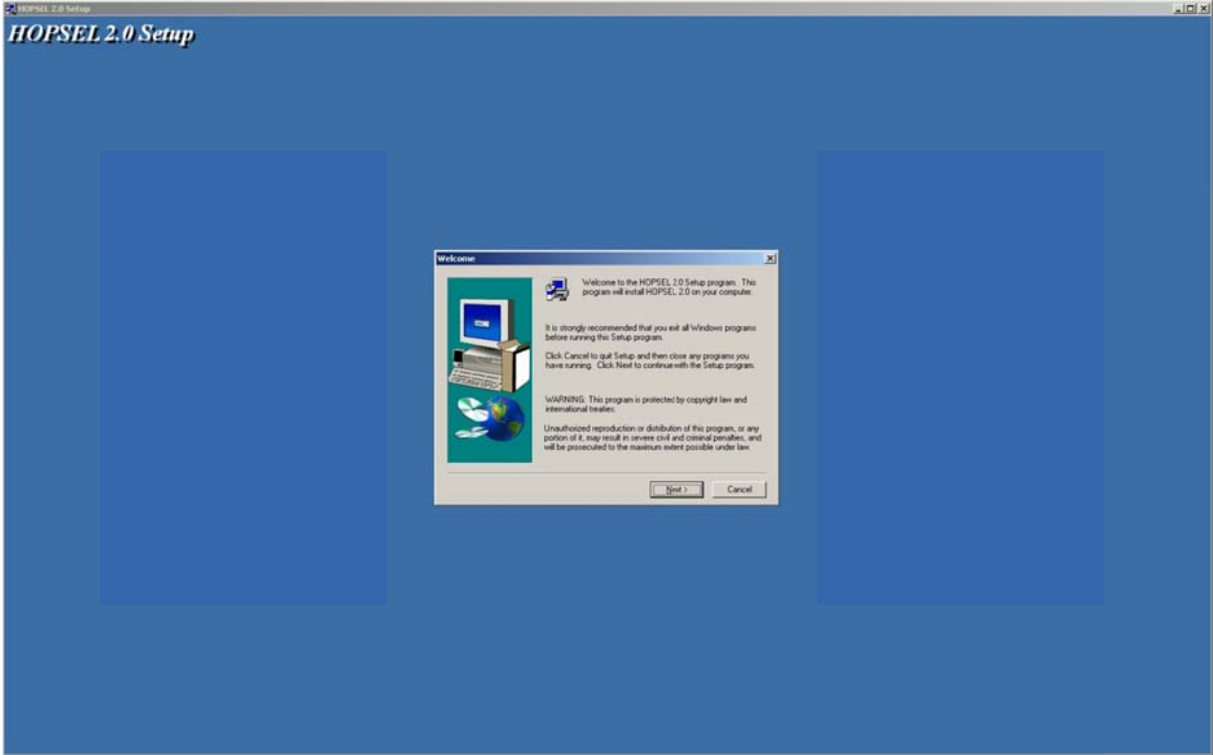

The setup archive will then be uncompressed. This can take some minutes. The lower bar indicates the progress.

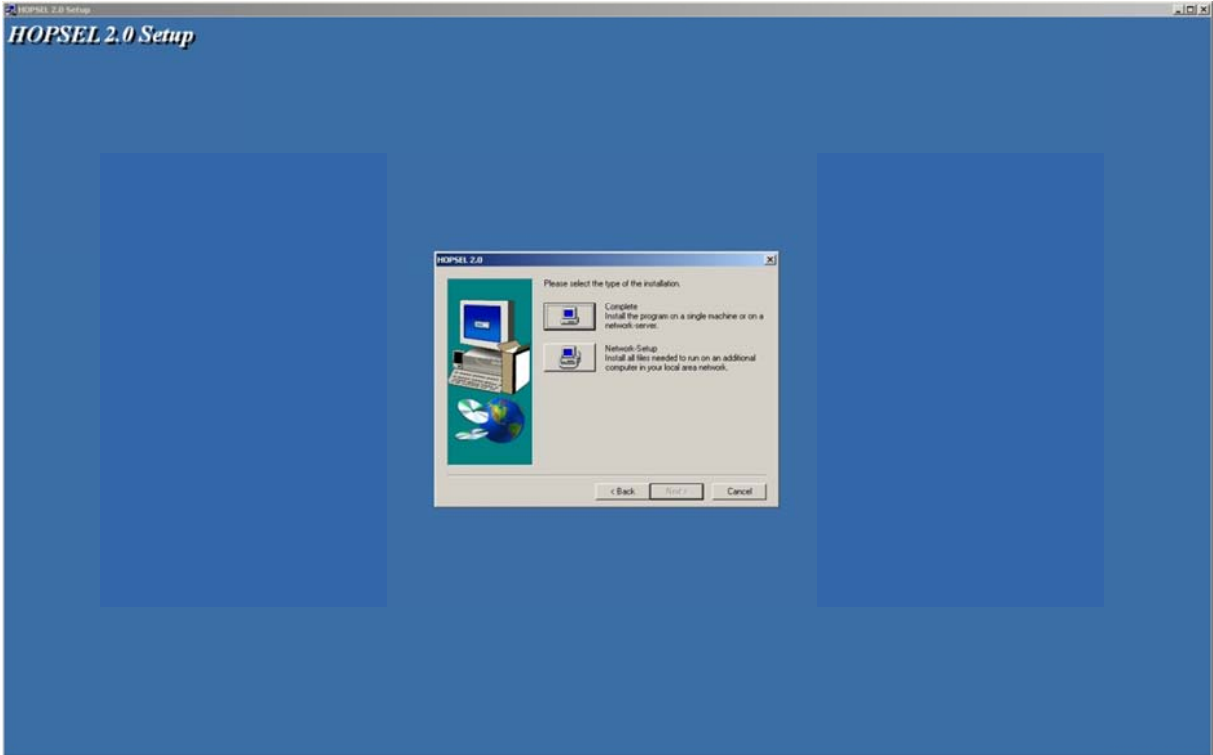

After all files necessary for the installation have been unpacked, the installation assistant will be automatically started. He will lead you through the installation process.

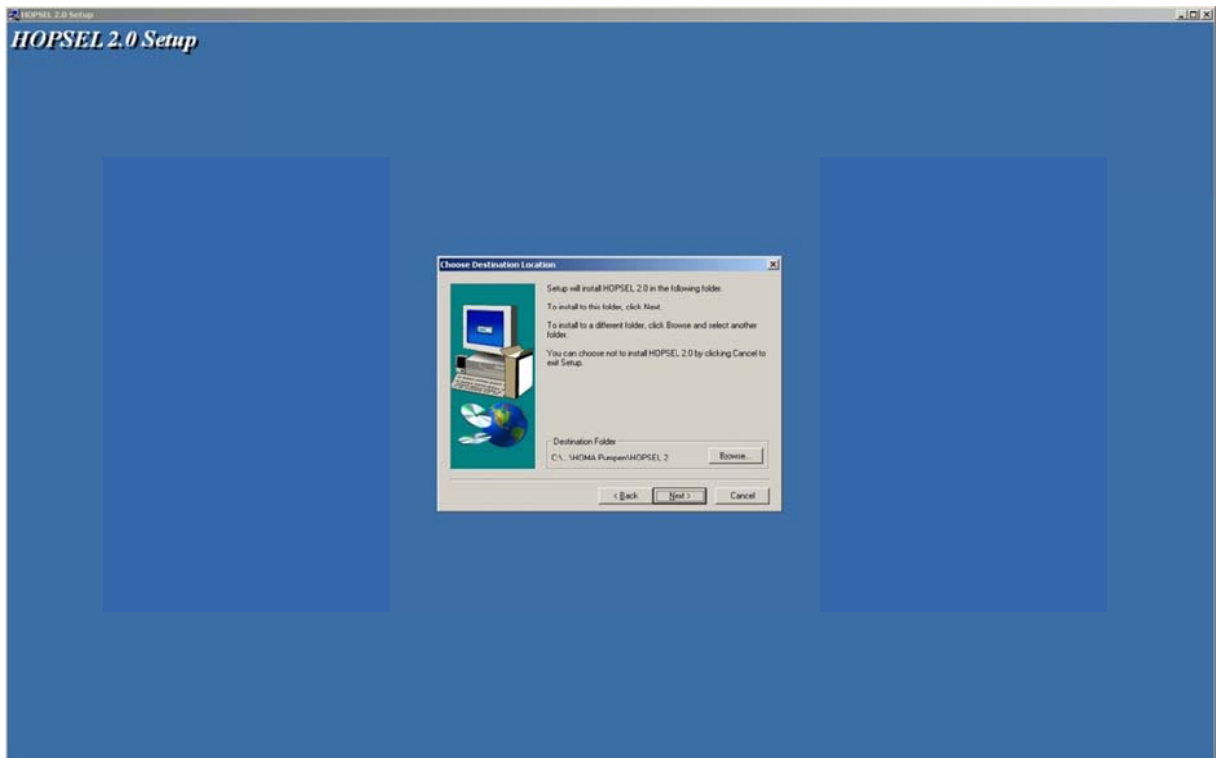

Confirm the first screen by clicking on „Next“.

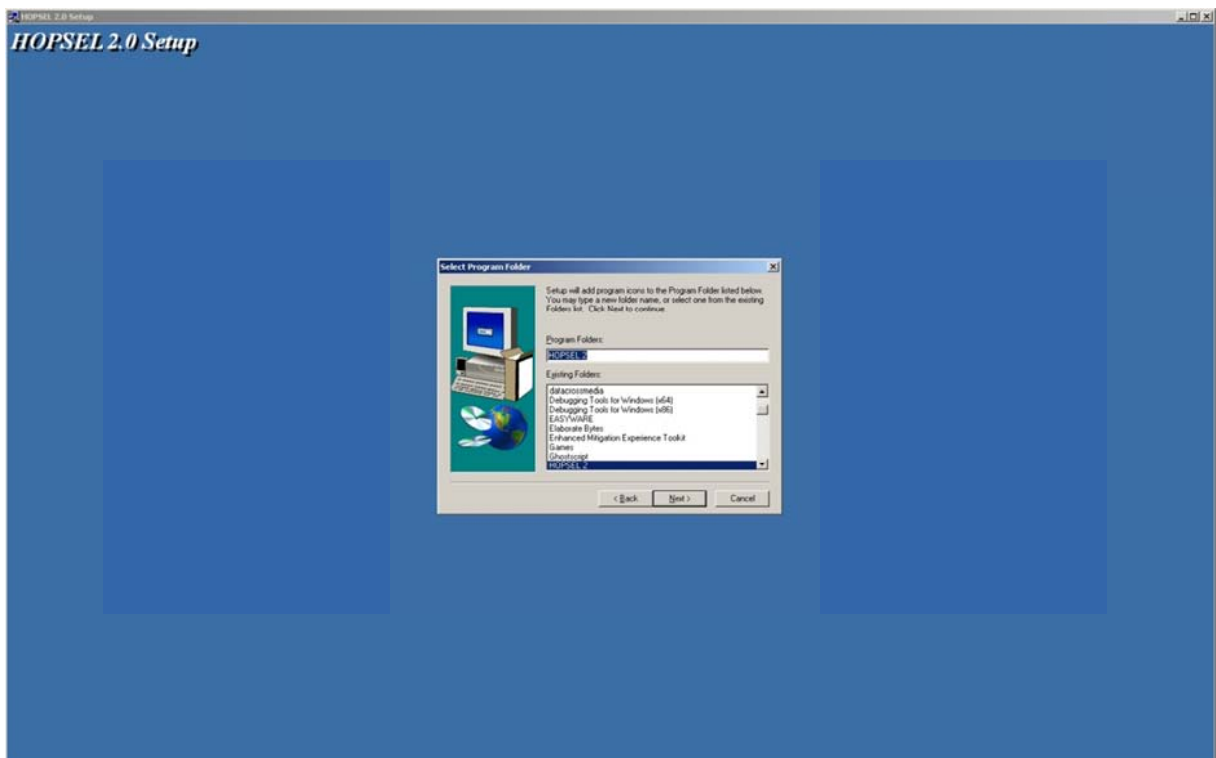

As type of the installation choose „Complete“.

In the next step you can select in which directory you want to install HOP.SEL. Generally you don't need to modify the default setting. Press "Next" to continue.

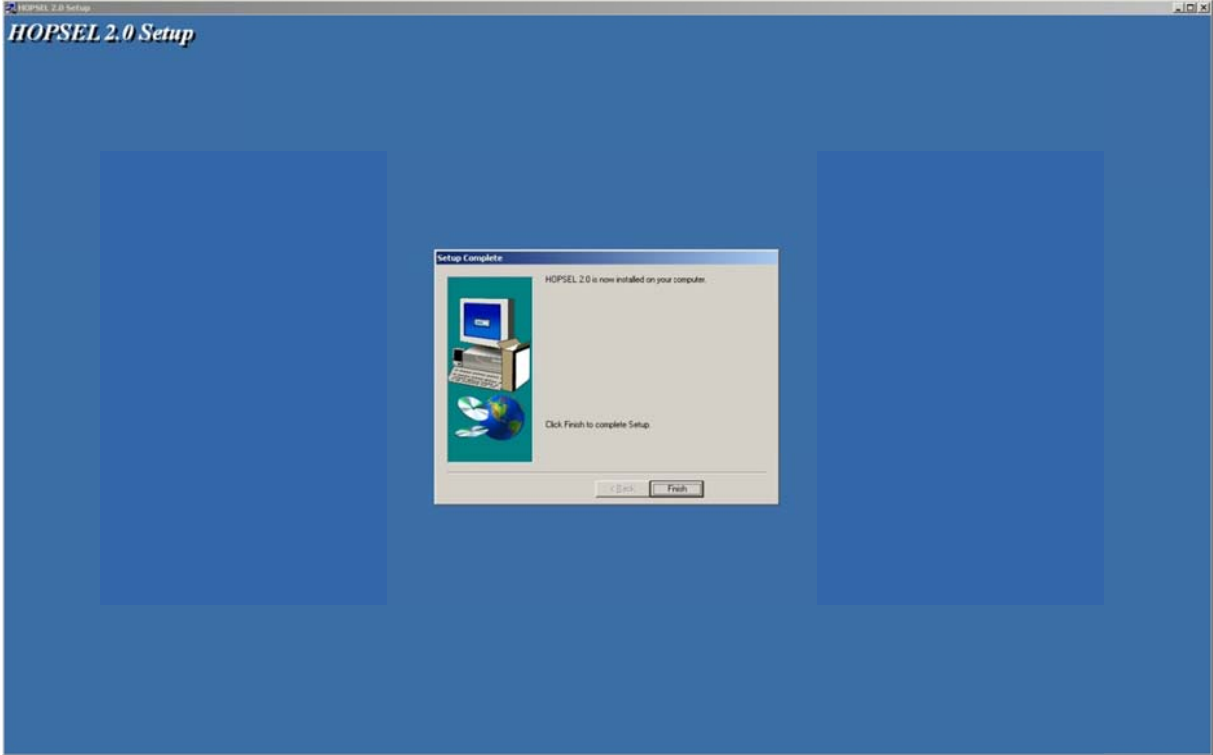

On the following screen you are asked where setup should create the program shortcut. You can leave the default setting untouched. The installation begins after you click "Next".

Wait until the installation is finished. It could take some minutes till the progress bar reaches 100%.

Click on the button „Finish“ to exit the installation.

The window of the WinZip Self-Extractor will be automatically closed after some seconds and HOP.SEL is then ready for use. You can start it by clicking on the desktop shortcut.

Information for users of Windows Vista / Windows 7

If you have any problems with the installation of HOP.SEL installation under Windows Vista / Windows 7 try disabling the feature „User Account Control“ (UAC) before starting the installation process. A guide for doing this can be found here:

http://www.petri.co.il/disable_uac_in_windows_vista.htm
